Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. in Information Science and Engineering; CGPA: 8.4

Technical Skills

Languages: Go, Python, TypeScript, SQL

Backend & Infra: Node.js, REST, WebSockets, Docker, GCP, Redis, CI/CD

Data & AI: PostgreSQL, MongoDB, Supabase, Pinecone (RAG), Prometheus, Grafana

Experience

Backend Intern

Mar. 2026 – Present

RemoteStar

Remote

- Built on-demand, per-job resume analysis in Go that scores candidate-job fit through OpenAI Structured Outputs, backed by Redis per-user and per-job locks, a 7-day result cache, and a credit ledger that charges on request and refunds on failure.
- Moved resume parsing to a strict Structured Outputs schema, rebuilt the tailoring pipeline for one-page output from Tika text plus parsed JSON, and added Gotenberg for HTML-to-PDF rendering.

Backend Intern

Apr. 2026 – Present

Final Round AI

Remote

- Built the Report V2 interview-report backend (Python, Node) with per-question and aggregate scoring stages and an evidence gate that blocks any report from completing without backing evidence.
- Fixed blank report emails affecting 40% of recent reports by publishing the RabbitMQ end event on session timeout.

SDE Intern

July 2025 – Feb. 2026

Seeqlo

Remote

- Wrote the backend in Go as a REST API for student-teacher workflows, and set up staging and production environments (Docker Compose on GCP Cloud Run, Firebase Hosting) that removed manual deployment.
- Enforced student, teacher, and admin RBAC with Firebase Security Rules across collections, and built the backend for an AI presentation generator on the Gemini API with real-time sync and auto-save.

LFX Mentee, CloudNativePG

Sep. 2025 – Dec. 2025

Cloud Native Computing Foundation (CNCF)

Remote

- Built a chaos-testing harness that deletes the PostgreSQL primary in a 3-instance CloudNativePG cluster under load and verifies recovery with Jepsen consistency checks and Prometheus probes, confirming sub-minute failover with no data loss.
- Automated the full flow in GitHub Actions: provision a Kind cluster, install the CloudNativePG operator and LitmusChaos, inject primary pod deletion, run Jepsen, and export result artifacts.

Projects

Throtl | Python, Scapy, Django Channels, Redis pub/sub, React, tc/iptables

- Built a distributed system that turns a Linux laptop into a Wi-Fi hotspot with real-time per-device bandwidth monitoring and throttling, split into a Scapy network engine, Django backend, and React dashboard communicating over Redis pub/sub.
- Summed per-client traffic over a 1-second sliding window, streamed live stats over WebSockets via Django Channels, and applied throttling through tc/iptables with one-click controls and threshold-based auto-throttling.

Open Source Contributions

Kubeflow (CNCF) – Contributor

Go, Python

Distributed training and TrainJob lifecycle

- Contributed a Megatron-Core GPT tensor-parallelism example to Kubeflow Trainer (PR #3201) that runs multi-GPU distributed training on a TrainJob, and authored the matching Trainer user guide.
- Authored and implemented the TrainJob lifecycle proposal adding `activeDeadlineSeconds` and `TTLSecondsAfterFinished` to the CRD (KEP #3068, impl #3258), and fixed all failing Kubeflow SDK E2E tests by handling Kubernetes 404/403 errors (#307).

LitmusChaos (CNCF Sandbox) – Contributor

Go

Precise pod targeting for operator-managed workloads

- Shipped upstream chaos-operator PR #510 adding a `labelMatchMode` field and authored litmus-go PR #777, letting LitmusChaos target operator-managed pods such as a CloudNativePG primary by label intersection.

Achievements

- Linux Foundation LiFT Scholarship**, 2026.
- Reliance Foundation Scholarship**: selected among the top 5,000 of 100,000+ applicants nationwide.
- 4th of 500 teams** at the Incubate Hackathon (JIPMER and IIT Bombay); **3rd of 1,200** at the Sandbox cybersecurity hackathon.
